

1 1/2 AGH DARLEY "HARRISON IHT"

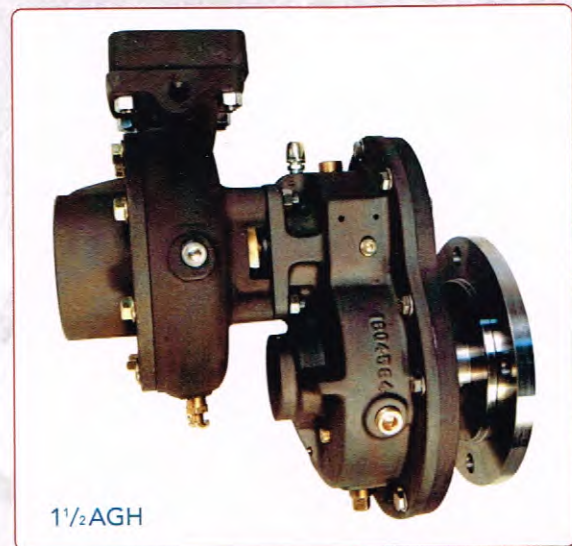

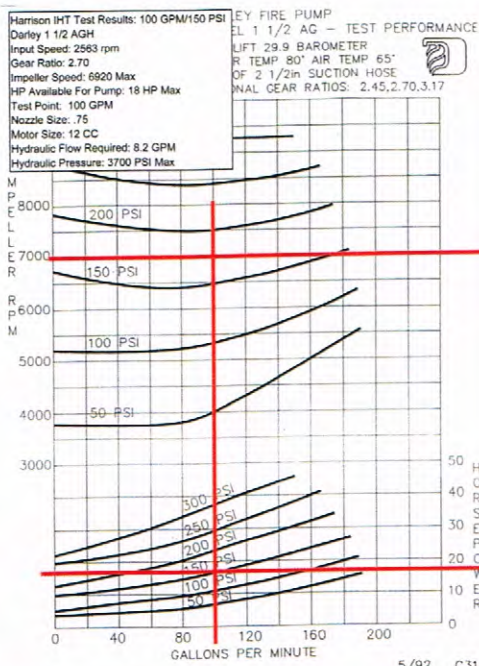

HYDRAULICALLY DRIVEN PUMP

Darley has partnered with Harrison to power the Darley 1.5 AGH utilizing Harrison's patent pending IHT system. The Pump in combination with the IHT Hydraulic System will produce a constant performance of 100 GPM @ 150 PSI. This performance is available from idle to utilize for stationary pumping as well as for pump and roll. The Darley/Harrison product offering allows for utilization of a single PTO port to drive the combination of your generator and fire pump in applications where PTO ports are limited without the need to sacrifice important space and weight in adding an auxiliary engine.
