What is resQube

The resQube is a collaboration between Harrison Hydra-Gen and Holmatro in a powerful combination utilizing the Harrison IHT-HQ systems and Holmatro's SR 40 Quad Pump technology.

It's an industry first, Self-Contained Hydraulic Rescue Tool Pump in a package designed especially for easy truck mounting by OEM apparatus manufacturers.

Harrison IHT allows you to run your onboard equipment using the powerful, reliable Harrison hydraulic motor, instead of gas engines, diesel engines, or electric motors. This also facilitates remote mounting in the apparatus.

Benefits of resQube

- Operates up to 4 tools simultaneously
- Reduces vehicle wheelbase
- Frees up valuable compartment space
- Easy installation
- Simplified operation
- Reliable power!

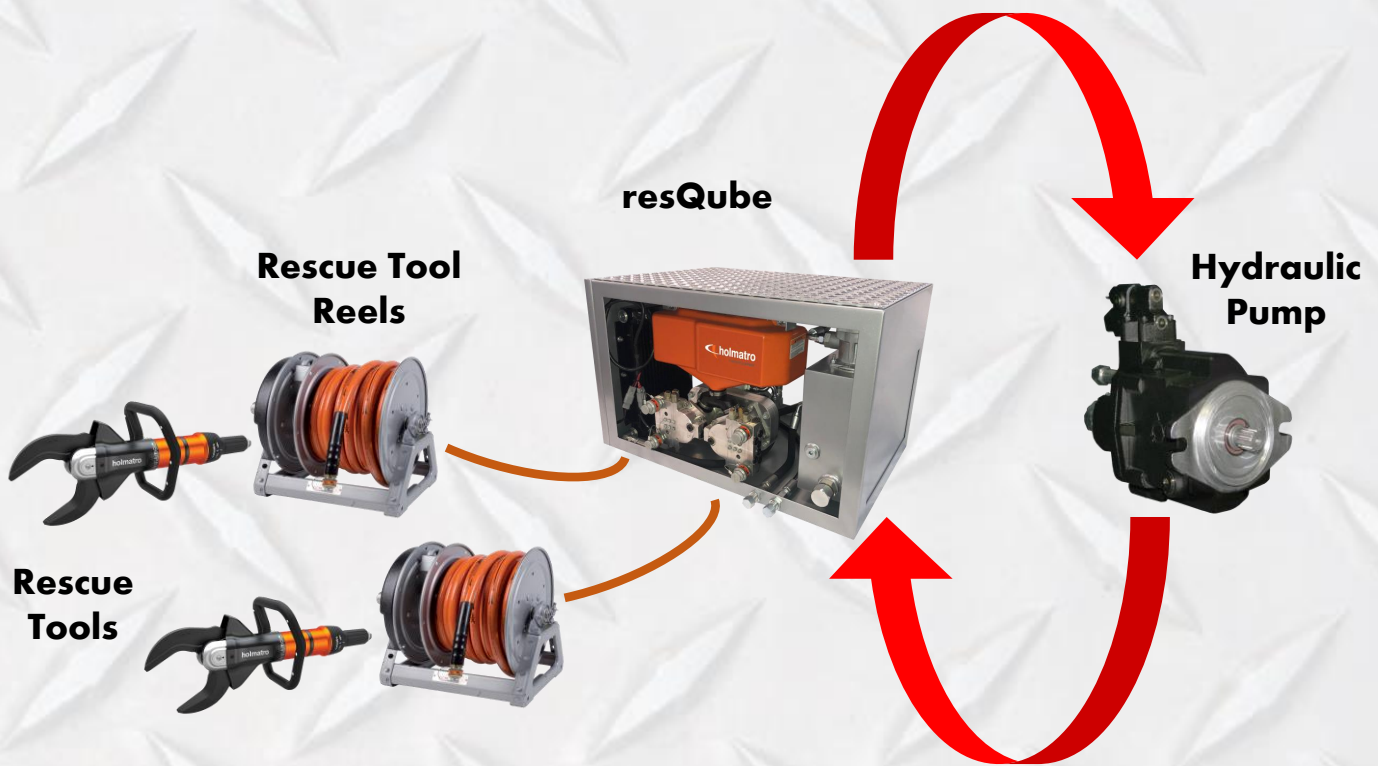

"Clean Power Technology".

The resQube features a Holmatro Spider Pump integrated with a Harrison Hydra-Qube, providing a single easy-to-mount package.

Holmatro's exclusive patented Core Technology[®] allows you to configure a rescue system that will easily power up to four Holmatro rescue tools simultaneously.

Using these additional Holmatro accessories: 90° outlet swivels, Bulkhead Selector Valves, and through-the-bulkhead Core Technology fittings along with custom length Core connection hoses, you can design your department's custom system.
